

The Future for LDCs: Are New Business and Regulatory Models Required for LDCs to Survive?

Wednesday October 15, 2014

Hilton Suites &
Conference Centre
Markham, Ontario

WELCOME

The Council for Clean and Reliable Electricity and the Ryerson Centre for Urban Energy welcome you to this important conference on the future for LDCs.

Officers and directors of municipally-owned electricity utilities continue to deliver electricity under increasing cost pressures and a complex set of governance and policy obligations. The conference brings together leading industry, academic and legal experts to explore the cumulative effect of these forces, and the future considerations that may be necessary in creating a new business model for survival.

The Council and the Ryerson Centre for Urban Energy are able to provide a neutral forum for the examination of these critical business and policy issues. We are pleased that you have decided to join the discussion, and look forward to your active participation.

Glen Wright
Chair
Council for Clean & Reliable
Electricity
